

Name: Jayne Moran

Postcode: 2450

About you: Business

Name of your business or organisation: A W MORAN SAWMILLING PTY LTD

1. What improvements should the NSW Government consider making to the existing Private Native Forestry Codes of Practice?: Keeping the wording and process simple having trained staff to contact for up to date information, approach industry for input into the legislation and codes.

Please indicate which code/s you are referring to: All codes

2. Do you have any suggestions to ensure the Private Native Forestry regulatory settings are efficient, enforceable and effective?: More staff processing applications inquiries and complaints. Follow up on complaints.....help stamp out the bad operators of our industry making it tarnished for everyone else. Consult with local councils but not allow them to be part of the approval process, dual approval process would be inefficient and costly to property owners and industry.

3. How can the NSW Government improve the authorisation and approval system for Private Native Forestry?: More staff would make the approval system more efficient. Make mapping systems more accurate, old growth and rainforest areas are been placed on maps by someone in a office with no knowledge of the area. we have zones on our property in a cleared paddock where there are no trees. Maps need updating and ground truthing as well as consultation with land owners they know their land .

4. What training and advice services would assist landholders, industry and the community?: Landholders need to know the value of timber they need to understand not every log is full of recoverable product, when it is sawn by the miller it could be crap inside and of no value. They need to understand the sliding scale for timber products value ie hardwood pallets right up to wharf and bridge timber, but not every log or log species can be cut into same. Property owners need to have rough figures available to them so they don't get ripped off by loggers contractors and sawmillers. Short modern video's for ALL parties. A training system that gives industry a stamp of approval showing the public they have taken on various training to be industry approved. Community need much more education on the value of timber, it is the most renewable building source! Facebook etc campaigns to reach

the city dweller to promote our industry instead of allowing the radical green movements to degrade our industry. Showing the people involved in the industry from loggers to the finished product ie THE HOUSES THEY LIVE IN!! Schools programs timber industry needs to be added to the farming industry regarding where your produce comes from and how renewable it is environmentally friendly.

5. Do you have any other comments or feedback relevant to Private Native Forestry that you would like to share with us?:

The timber industry employs a lot of people directly and indirectly the majority of the industry needs support from government departments to keep our business running, make the legislation simple keep it to one department for approvals and fine the rule breakers. Its not rocket science.
